- **Taxonomy of Collaborative Failure Modes**
  - **Phase I: Task Comprehension Failures**
    - **F1.1: Foundational Competency Failures**
      - **F1.1.1: Flawed Supporting Evidence for Argumentation due to Incorrect Visual Information Extraction**
        - **Collective Misidentification due to Common Deficiencies in the LLM**
        - **Using Fabricated Information as Supporting Evidence due to Visual Hallucination**
        - **Incorrect Analysis Object due to Key Entity Classification Error**
        - **Contradictory Judgments on the Same Physical Feature due to Unstable Visual Interpretation**
      - **F1.1.2: Application of Incorrect Medical Knowledge due to a Lack of Professional Knowledge in the Training Corpus**
    - **F1.2: Problem Scoping Errors**
      - **F1.2.1: Addressing Tangential Queries Resulting in Misalignment with Clinical Intent**
      - **F1.2.2: Neglect of Visual Evidence due to Task-Type Misclassification**
      - **F1.2.3: Premature Negation of a Multi-Condition Query due to a Single Unsatisfied Condition**
      - **F1.2.4: Failure to Prioritize High-Risk Clinical Outcomes Resulting in Misleading Diagnoses**
  - **Phase II: Failures in the Collaboration Process**
    - **F2.1: Convergence Towards a Flawed Consensus**
      - **F2.1.1: Flawed Consensus due to LLM Deficiencies**
      - **F2.1.2: Acceptance of Invalid Consensus due to a Failure to Validate Reasoning Processes during Aggregation**
      - **F2.1.3: Suppression of Evidence-Consistent Diagnoses due to Disproportionate Weighting of High-Severity Outcomes**
    - **F2.2: Ineffective Dissent Handling Mechanisms**
      - **F2.2.1: Suppression of Valuable Minority Opinions due to Majority Bias**
      - **F2.2.2: Acceptance of Flawed Arguments due to a Preference for Specific Roles or Styles**
    - **F2.3: Ineffective Discussion Process**
      - **F2.3.1: Failure to Resolve Factual Contradictions Leads to Inconsistent Output**
      - **F2.3.2: Opinion Repetition without Information Gain Leads to Stalled Discussion**
      - **F2.3.3: Self-Contradictory Output due to a Lack of Cross-Turn Memory**
  - **Phase III: Failures in the Final Decision-Making Phase**
    - **F3.1: Flaws in Viewpoint Aggregation Leading to Decision Errors**
      - **F3.1.1: Bypassing of Evidence-Based Evaluation due to a Voting-Based Decision Rule**
      - **F3.1.2: Excessive Weighting of Anomaly Found Conclusions Prevents Agents from Evaluating the Credibility of Conflicting Evidence**
    - **F3.2: Loss of Key Correct Information**
  - **Phase IV: Framework & Meta-Level Failures**
    - **F4.1: Flaws in Framework Design**
      - **F4.1.1: Role Assignment Fails to Elicit Domain-Specific Expertise, Leading to a Loss of Collaborative Diversity**
        - **Interaction Workflow Redundancy due to Inappropriate Role Assignment**
        - **Ineffective Medical Debate by Confusing Task Refusal with Medical Disagreement**
      - **F4.1.2: Collaboration Process Rendered Ineffective by Sole Reliance on Initial Judgment**
    - **F4.2: Evaluation & Benchmark Issues**
      - **F4.2.1: Evaluation Failure due to Inaccurate Ground Truth Annotations**
